                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S
The invention relates to isolated polynucleotide (I) and polypeptide (I sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also use in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           activity of (II) or to treat disease states involving (II). (II) is Cuseful for generating antibodies against it, detecting or quantitating a foot pypeptide in tissue, as molecular weight markers and as a food consists expressing (II). (I) and (II) are useful in medical imaging CC involving aberrant protein expression or biological activity. The CC diagnostics, forensics, gene mapping, identifications in CC and to produce other types of data and polymore of the relation of mutations are calculated activity of the produce other types of data and products dependent on DNA and CC amino acid sequences of the invention. Note: The sequence data for this cC canno acid sequences of the invention. Note: The sequence data for this cC patent did not appear in the printed specification, but was obtained in CC electronic format directly from WIPO at CC electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      mosquito; olfactory gene; arrestin 1; pest control; olfaction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              383
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         protein SEQ ID NO:2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ₽
```

The present invention describes a purified Anopheles gambiae olfaction polypeptide comprising a 393, 394, 380, 411, 412, 391, 157 or 401 residue amino acid sequence (see ABP52833 to ABP52840) (S1), a conservatively modified amino acid sequence of them, or a sequence of (S1) with at least 10 consecutive residues. Also described: (1) an isolated polymuclectide comprising: (a) a nucleotide sequence encoding the purified Anopheles gambiae olfaction polypeptide; or (b) a nucleotide sequence that hybridises under stringent conditions to a hybridisation probe comprising a 1964, 1239, 1142, 1236, 1194, 1176, 474 or 1206 nucleotide sequence (see ABQ75102 to ABQ75105 and ABQ75110 to ABQ7513) (S2), or its complement; and (2) a method for identifying an agent that binds to

New mosquito olfaction polypeptides and polynucleotides, useful for mosquito management, i.e. controlling the pest and disease vectors, for identifying pest control agents.

The invention provides 9 novel mosquito CC polypeptides and the nucleic acids encoding them. These are arrestins 1 CC and 2 and odorant receptor molecules 1-7. The odorant receptors function of a signal transduction pathway for the activation of CC mosquito olfaction. Arrestin functions to inhibit the activated signal cransduction to accade. Thus, the odorant receptors act as an 'on' switch of CC mosquito. Methods are provided for identifying compounds that indevided for identifying compounds that interfere CC compounds that modulate arrestin 2 activity. These are useful for the cc control of mosquitoes, particularly by reducing their ability to locate xx xx

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher sukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABIG167-ABIG20511), expressed DNA sequences (ABIG1684-ABIG175) and the encoded proteins (ABIG177-ABIG177). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly for the printed specification, but was obtained in electronic format directly

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to a polynucleotide for preventing, treating or diagnosing a disease in an individual. The composition or the polypeptide, polynucleotide or RNA precursor, or antibody is useful for diagnosing, preventing or treating diseases (e.g. cell proliferative diseases such as cancer) in an individual. These may also be used for identifying substances capable of binding to or modulating the function of the polypeptide, capable of affecting the function of the corresponding gene, or capable of affecting the cell division cycle or cell cycle progression, preferably mitosis and/or meiosis. The present sequence represents an antagonist of cell cycle progression protein
                                                                                                                                                                                                                                                                                                                                                                                               G protein-coupled receptor; GPCR; GPCR ligand; retinitis pigm stationary night blindness; colour blindness; nephrogenic D; isolated glucocorticoid deficiency; hyperfunctioning thyroid familial hypocalciuric hypercalcemia; hyperparathyroidism;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 364 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New cell cycle progression genes and proteins for modulating progression in cells, for preventing, treating or diagnosing proliferative diseases (e.g. cancer) or for identifying modulating modulations.
                                                                      Identifying a G protein-coupled receptor ligand, useful for treating retinitis pigmentosa, color blindness or neurlogical disorders, uses phosphorylation-independent arrestin mutants particularly suited for
                                                                                                                                                                                                                                                                                                                                                                               neurological disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          An exemplary phosphorylation-independent arrestin mutant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 2; SEQ ID NO 18; 461pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                გგეგეგეგეგეგეგეგეგეგეგეგ
The present sequence is the protein sequence of arrestin 2, a novel mosquito olfaction molecule. The invention provides 9 novel mosquito polypeptides and the nucleic acids encoding them. These are arrestins 1 and 2 and odorant receptor molecules 1-7. The odorant receptors function
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC ligands and/or modulators of G protein-coupled receptors (GPCRs). A comprising the GPCR and a constitutively active arrestin mutant for computating the GPCR and a constitutively active arrestin g a composition composition test compound; and determining the ability of the test compound to binding of arrestin mutant to the GPCR, where modulation of CC modulate binding of arrestin mutant to the GPCR, where modulation of CC without the cest compound is a GPCR ligand. The method is CC used for identifying potential ligands and/or modulators of GPCRs, where modulators of CC GPCR may be used for treating patients having e.g. retinits pigmentosa, CC stationary night blindness, colour blindness, nephrogenic DI, isolated CC glucocorticoid deficiency, hyperfunctioning thyroid adenomas, familial CC compounds (e.g. a small molecule library of compounds) or a composition containing a plurality of GPCRs in the methods may be used for screening pluralities of test cassays for identification of GPCRs. The methods may be used for screening or a composition of GPCRs, and for identification of GPCRs antagonists and/or agonists of orphan
                                                                                                   New mosquito arrestin 1 and 2 genes and polypeptides, useful for identifying mosquito olfaction molecule binding compounds which reduce the ability of mosquitoes to locate sources of bloodmeal, e.g. humans.
                                                                                                                                                                                                                                                                                 08-MAR-2002; 2002US-00094240.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

ABB61964
                                        The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and insecticides in higher eukaryotes for the development of discloses genomic DNA sequences (ABL/6176-ABL/30511), expressed DNA sequences (ABL/6176-ABL/30511), expressed DNA ABB72072). The sequence data for this patent did not form part of the from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        in a ligand-induced signal transduction pathway for the activation of mosquito olfaction. Arrestin functions to inhibit the activated signal transduction cascade. Thus, the odorant receptors act as an 'on' switch, and arrestin as an 'off' switch for the odorant detection system of the mosquito. Methods are provided for identifying compounds that interfere compounds that modulate arrestin 2 activity. These are useful for the control of mosquitoes, particularly by reducing their ability to locate sources of bloodmeal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 398 AA;

The present sequence represents an exemplary phosphorylation-independent CC arrestin mutant. Such mutants are used in screening assays to identify CC ligands and/or modulators of G protein-coupled receptors (GPCRs). A CC method for identifying a GPCR ligand comprises contexting a composition CC comprising the GPCR and a constitutively active arrestin mutant with a CC comprising the GPCR and a constitutively active arrestin mutant with a CC compound; and determining the ability of the test compound to CC modulate binding of arrestin mutant to the GPCR, where modulation of CC binding indicates that the test compound is a GPCR ligand. The method is CC used for identifying potential ligands and/or modulators of GPCRs, CC particularly modulators, for use as human therapeutics. Modulators of GPCR may be used for treating patients having e.g. retinitis pigmentosa, CC stationary night blindness, colour blindness, nephrogenic DI, isolated CC glucocorticoid deficiency, hyperfunctioning thyroid acenomas, familial CC hypocalciuric hypercalcemia, hyperparathyroidism and neurological compounds (e.g. a small molecule library of compounds) or a composition of GPCRs, and for identification of natural and surrogate agonists of orphan CC GPCRs, and for identification of GPCR antagonists and/or agonists
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             유

                                                                                                  The present sequence represents an arrestin protein. The specification CC describes phosphorylation-independent arrestin mutants. These mutants are cused in screening assays to identify ligands and/or modulators of GC used in screening assays to identify ligands and/or modulators of GC protein-coupled receptors (GPCRs). A method for identifying a GPCR ligand CC comprises contacting a composition comprising the GPCR and a CC constitutively active arrestin mutant with a test compound; and CC determining the ability of the test compound to modulate binding of CC arrestin mutant to the GPCR, where modulation of binding indicates that the test compound is a GPCR ligand. The method is used for identifying CC potential ligands and/or modulators of GPCRs, particularly modulators, CC for use as human therapeutics. Modulators of GPCR may be used for CC treating patients bindings, retinitis pigmentosa, stationary night CC bindness, colour bindness, nephrogenic DI, isolated glucocorticoid deficiency, hyperfunctioning thyroid adenomas, familial hypocalciuric hypercalcemia, hyperparathyroidism and neurological disorders. The CC methods may be used for screening pluralities of test compounds (e.g. a Small molecule library of compounds) or a composition containing a contentification of factural and surrogate agonists of orphan GPCRs, and for identification of factural and surrogate agonists of orphan GPCRs, and for identification of factural and surrogate agonists of orphan GPCRs, and for identification of factural and surrogate agonists of orphan GPCRs, and for identification of factural and surrogate agonists of orphan GPCRs, and for identification of factural and surrogate agonists of orphan GPCRs, and for identification of factural and surrogate agonists of orphan GPCRs, and for identification of factural and surrogate agonists.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ş

The invention discloses a composition comprising two or more isolated rat corrivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cin comprising the vector, a method for identifying a nucleotide sequence. Also comprising the vector, a method for identifying a nucleotide sequence that increases or decreases the expression of the polynucleotide sequence that is differentially regulated in an animal subjected to pain and a that is differentially expressed in neuronal tissue of a first animal composition of the polynucleotide sequence the expression of a polynucleotide sequence which is differentially expressed in neuronal tissue of a first animal compound that regulates the activity of one or more of the polynucleotide sequence compound that regulates the activity of one or more of the polynucleotides, a method for join, a method for identifying a compound of a compound or small molecule that regulates the activity of one or more of the polynucleotide sequence of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound useful in treating completions, a method for identifying a compound useful in treating the polynucleotide or their antibodies. The polynucleotide or the compound that injury (CCI) and spared nerve injury (Chung), chronic constriction the specification, which is differentially expressed during pain. Note:

The sequence data for this patent did not form part of the printed of the printed in the polynucleotide or the printed of the printed during pain. Note:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 1; Page; 1017pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New composition comprising two or more isolated polypeptides, useful preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (GEHO )

CC claimed are a vector comprising the novel polynucleotide, a host cell CC claimed are a vector comprising the novel polynucleotide, a host cell CC comprising the vector, a method for identifying a nucleotide sequence contains the vector comprising the vector comprising the vector. The notation of the polynucleotide sequence contains the vector and a property of the compound which regulates the compound that is differentially expressed in neuronal tissue of a first animal compound which regulates the expression of the polynucleotide sequence the expression of a polynucleotide sequence which is differentially expressed in neuronal tissue of a first animal compound that regulates the expression of a polynucleotide sequence which is differentially compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the composition. The polynucleotides given in the composition and a pharmaceutical composition composition composition and a pharmaceutical composition composition in treating composition and a pharmaceutical composition composition composition that regulates the polypeptides or their antibodies. The polynucleotide given in the composition composition composition composition composition composition composition composition composition composition for a serior in the compound that serior activity is useful for preparing a medicament for treating composition co The invention discloses a composition comprising two or more isolated or human polynucleotides or a polynucleotide which represents a fragme derivative or allelic variation of the nucleic acid sequence. Also New composition comprising two or more isolated polypeptides, useful preparing a medicament for treating pain in an animal. Claim 1; Page; 1017pp; English. rat

This invention relates to a method of differentially modulating the CC growth or differentiation of blood endothelial cells (BEC) or lymphatic cc endothelial cells (EEC) comprises contacting endothelial cells with a CC composition comprising an agent that differentially modulates blood or lymphatic endothelial cells. Treating hereditary lymphoedema comprises CC identifying a human subject with lymphoedema and with a mutation in at CC identifying a human subject with lymphoedema and with the proviso that CC correlates with lymphoedema in human subjects, and with the proviso that CC correlates with lymphoedema in human subjects, and with the proviso that CC correlates with lymphoedema in human subjects, and with the proviso that CC composition comprising a lymphatic growth agent selected from VEGF-C or VEGF-D polypeptides and polymucleotides. The invention may be useful for the development of compounds with an antiangiogenic, cytostatic, CC vasotropic or antiinflammatory activity or for gene therapy. The method CC is useful in modulating the growth or differentiation of blood condothelial cells or lymphatic endothelial cells, in treating hereditary CC prodisposition to the disorder or an endothelial cell disorder or condothelial cells in manufacturing a medicament for the differential modulation of blood vessel endothelial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                growth; differentiation; blood endothelial cell; BEC; lymphatic endothelial cell; LEC; hereditary lymphoedema; VEGFR-3; lymphatic growth agent; VEGF-C; VEGF-D; antiangiogenic; cytostatid; vasotropic; antiinflammatory; gene therapy; endothelial cell disorder;

The sequence presented is a human protein (shown in Table the specification) which is differentially expressed during pain. Not the sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WII
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Example 1; SEQ ID NO 173; 176pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 07-MAR-2003; 2003WO-US006900
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   02-OCT-2003.

                                              lymphatic growth agent may also be used in manufacturing a medicament for the treatment of hereditary lymphoedema resulting from a mutation in a LEC gene or of other diseases involving the lymphatic vessels, such as various inflammatory diseases and cancer metastasis via the lymphatic system. The present sequence is that of a human LEC/BEC differentially expressed protein which is related to the method of the invention Note: This sequence does not appear in the specification but was obtained by the indexer using the source data given in table 14 of the specification.
Sequence
                                                                                                                                                                                                                                                                                                cell or lymphatic vessel endothelial cell growth or differentiation. Novel complex of protein-protein interactions in adipocyte cells for identifying compounds that modulate the protein-protein interactions and useful for treating obesity and metabolic disorders.

Claim 1; Page 53; 125pp; English.

The invention relates to a complex of protein-protein interactions (forming a protein-protein interaction map, PIM) in adipocyte cells as defined in the specification, or polynucleotides in adipocyte cells as for the polypeptides. Also included are a recombinant cell expressing the interacting polypeptides and a method of selecting a modulating compound in adipocyte cells, by cultivating a recombinant host cell on a selective medium containing a modulating compound and a reporter gene the expression of which is toxic for the recombinant host cell which is transformed with two vectors, where the first vector comprises a polynucleotide encoding a first hybrid polypeptide and DNA binding domain and the second vector comprising a polynucleotide encoding a second hybrid polypeptide and an activating domain that activates the toxic reporter gene, when the first and second hybrid polypeptides interact and selecting the modulating compound which inhibits the growth of the

            The invention discloses a composition comprising two or more isolated rat CC or human polynucleotides or a polynucleotide which represents a fragment, cc claimed are a vector comprising the nucleic acid sequence. Also comprising the vector, a method for identifying a nucleotide, a host cell cc which is differentially regulated in an animal subjected to pain and a vector comprising the novel polynucleotide sequence (cc which is differentially regulated in an animal subjected to pain and a cc that increases or decreases the expression of the polynucleotide sequence cc that is differentially expressed in neuronal tissue of a first animal cc compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the composition, a method for identifying a compound that regulates the activity of one or more of the composition, a method for identifying a composition, a method for identifying a composition, a method for identifying a composition, a method for identifying a composition, a method for identifying a composition, a method for identifying a composition, a method for identifying a composition, a method for identifying a composition, a method for identifying a composition, a method for identifying a composition, a method for identifying a composition, a method for identifying a composition.
                                                                                                                                                                                                                                                                                                                                                                             Claim 1; Page; 1017pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                  New composition comprising two or mopreparing a medicament for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GENBANK; P29067.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   recombinant host cell (i.e. using the yeast two-hybrid system). The complexes are useful for identifying compounds that modulate the protein interactions and useful for treating obesity and metabolic compound isolated by the method is useful for treating and preventing obesity or metabolic disease. The interactions between the proteins of the complex further define as set of selected interacting domains SID. The present sequence represents a member of the protein complex of the bait protein in the yeast two-hybrid assay
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Local 5

The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also comprising the vector comprising the novel polynucleotide a host cell which is differentially regulated in an animal subjected to pain and a that increases or decreases the expression of the polynucleotide sequence that increases or decreases the expression of the polynucleotide agent subjected to pain, a method for identifying an agent state is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying an agent of the polynucleotide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      RESULT 15

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               method for identifying a compound or small molecule that regulates the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polypeptides given in the pain and a pharmaceutical composition comprising the one or more modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction through). The sequence presented is a rat protein (shown in Table 2 of the sequence data for this patent did not form part of the printed specification, but was obtained in electronic form part of the printed for winn in r/m.h/m.h/m.h/i.ahad not seminance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 410 AA;

CC the expression of a polynucleotide sequence which is differentially CC expressed in an animal subjected to pain, a method for identifying a CC compound that regulates the activity of one or more of the CC polynucleotides, a method for producing a pharmaceutical composition, a CC method for identifying a compound or small molecule that regulates the CC activity in an animal of one or more of the polypeptides given in the CC specification, a method for identifying a compound useful in treating CC pain and a pharmaceutical composition comprising the one or more CC polypeptides or their antibodies. The polynucleotide or the compound that CC modulates its activity is useful for preparing a medicament for treating CC pain (e.g. spinal segmental nerve injury (Fung), chronic constriction CC injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene CC therapy). The sequence presented is a rat protein (shown in Table 2 of CC the specification) which is differentially expressed during pain. Note: CC The sequence data for this patent did not form part of the printed CC specification, but was obtained in electronic form directly from WIPO at CC ftp.wipo.int/pub/published_pct_sequences.
Sequence 410 AA;

Sequence 27414, Application US/09252991A

Patent No. 6551795
GENERAL INFORMATION:
APPLICANT: MATC J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
FILE REFERENCE: 107196,136
CURRENT APPLICATION NUMBER: US/09/252,991A
PRIOR APPLICATION NUMBER: US/09/252,991A
PRIOR APPLICATION NUMBER: US/09/252,991A
PRIOR APPLICATION NUMBER: US/09/252,991A

US-09-349-016-9940
; Sequence 9940, Application US/09949016
; Patent No. 6812339
; GENERAL INFORMATION:
; APPLICANT: VENTER, J. Craig et al.
; TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
; TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
; CURRENT APPLICATION UNDER: US/09/949,016
; CURRENT FILING DATE: 2000-04-14
                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                    ORGANISM: Pseudomonas aeruginosa
                                                                                                                                                                                                                                                                                                                                                                      Matches

-!- FUNCTION: Regulates photoreceptor cell deactivation. Arr. proteins are mediators of rhodopsin inactivation and are for the termination of the phototransduction cascade. Photoreceptors. Inner and outer segments, and the inner regions of the retina.

-!- PTM: Phosphorylated, but does not undergo light-induced
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Dolph P.J.,
